

Monitoring 9.0

Release notes

16.11.2016 AxxonSoft releases Monitoring Software Package 9.0 based on the Intellect PSIM platform

New features and improvements

1. Server of Control can now operate as service.
2. Agent of Control can connect to Server of Control not via IP address only but via DNS name.

Fixes

1. Fixed bug caused the calendar not to appear when double-clicking the date area in the Live video image playback window in the video archive mode.
2. Fixed bug when the width and height of the Search in archive interface object didn't match actual values specified in the settings.
3. Fixed bug that caused Intellect not to start when ATM Intellect and Monitoring were cooperating in the distributed architecture.
4. Fixed bug that caused Monitoring software package to be installed in the update mode when ATM Intellect is already installed. As a result, Monitoring software package failed to install and it could not be removed from the system.
5. Fixed periodic error happened when the Partition of Control object disappeared in the object tree in Intellect but stayed in the Monitoring interface object when deleting Partition of Control on the Server of Control.
6. Fixed bug that caused Partition of Control object not to operate when its previously saved configuration was loaded.
7. Several minor bugs have been fixed.
8. Documentation has been updated.
