

POS-Intellect 5.2

Release Notes

17.02.2017 AxxonSoft releases version 5.2 of the POS-Intellect retail payment monitoring solution. This version is intended for use with version 4.10.0 (and above) of the Intellect PSIM.

New features and improvements

1. There is a new utility for collecting logs from cash desks with no need to install Intellect;
2. Precia Molen scales have been integrated.

Fixes

1. There was incorrect display of diacritic symbols in web reports;
2. There was incorrect display of Kazakh localization in the POS terminal settings;
3. Replication did not work after update;
4. Cashiers were not added to CashierDic when only cashier's name was recorded;
5. Operation of COOEC plugin through COM port has been restored;
6. The DB Server was not found when POS Intellect was installed;
7. Titles were not stored to the DB if the camera was on another Server;
8. At some conditions the receipt contents was not displayed;
9. Titles were not stored to the DB if < and > symbols were in the string beginning;
10. There was no video in the receipt viewer on the Client.

For information about compatibility of POS-Intellect with Intellect versions, refer [here](#).
